

ISO 9001 : 2008 Certified Company

Product Background:

This one of a kind product alerts pedestrians and vehicles of nearby overhead crane use.

Specifications:

☒ Power: 120 Watts

☒ Voltage: 9-60 Volts DC

☒ Lumens: **12,000 lumens**

☒ LEDs: 24 (Cree LED)

☒ LED color temperature: 6000K

☒ Beam Type: Pencil beam

☒ Working life: 50,000 hours

☒ Size: 9" X 3.9" X 9.2" (229 X 98 X 234mm)

☒ Weight: 12 pounds

☒ Waterproof: IP67

☒ Working temperature: -40~85°C

Material: Aluminum die-cast housing.

☒ Approval: ISO9000--CE--RoHS

☒ Adjustable mounting bracket: 150 degree up/down.

☒ Cable Length: 3.3 meters (10').

☒ CE & RoHS approved.

☒ Available in red or blue colors. We suggest red, since it shows up better from higher heights and differentiates itself from the smaller forklift blue spot lights which are now very common.

Features:

☒ Easy to install.

☒ 10' cable connects to 9-60 volts DC input power, installs in minutes. We can also recommend a converter that allows the use of AC power if needed on overhead cranes.

☒ Includes an adjustable mounting bracket, providing an easy connection to any overhead crane.

☒ IP67 rated for indoor and outdoor use.

☒ Heavy duty cast aluminum.

How it works:

☒ Mount the crane spotlight on any overhead crane.

☒ The 150 degree up/down mounting bracket allows precise positioning of beam on floor below.

☒ The beam is usually positioned so pedestrians below are aware of the crane hook that is coming.

☒ Can be used in a single light, double light and quad light configuration depending on your application.

Benefits:

- ☑ Reduce accidents!! Many crane accidents involve pedestrians, so warning them of the presence of the hook/load is highly beneficial.
- ☑ When a pedestrian or vehicle operator sees the beam on floor, they know danger is closer by.
- ☑ Very effective for more precise positioning of the crane by the crane operator.

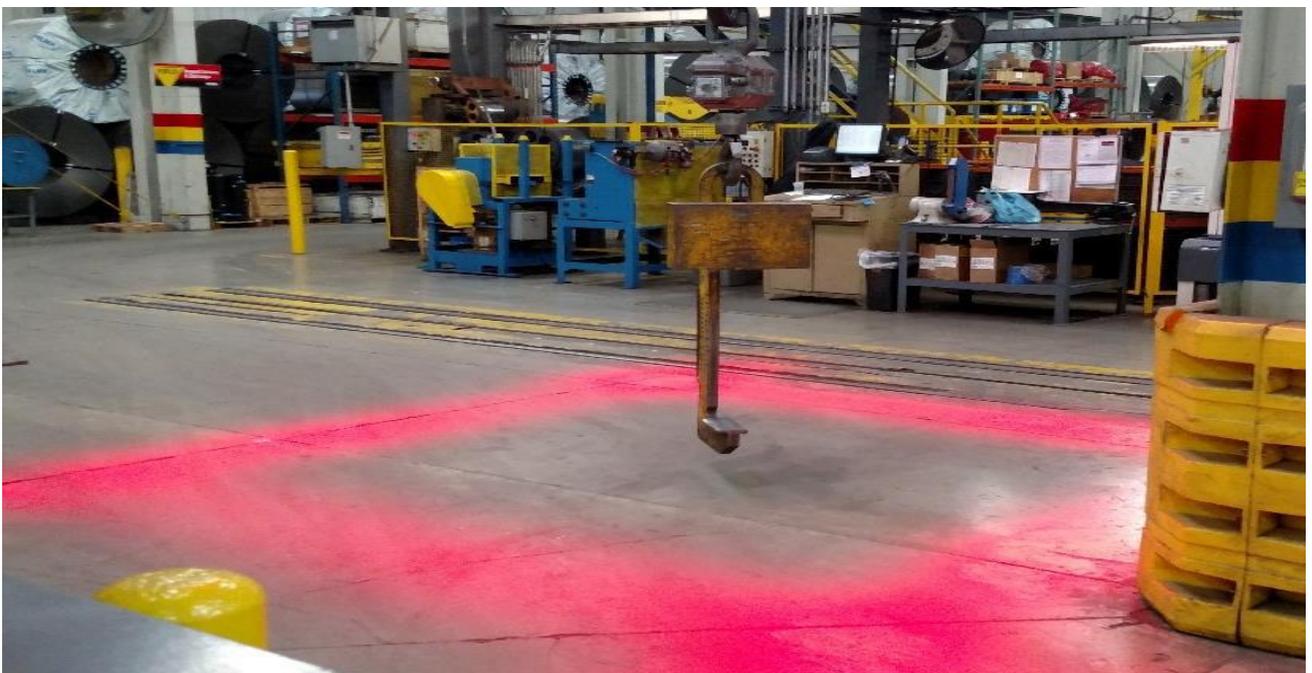

Single spot light configuration (available in red or blue)

Dual spot light configuration (available in red or blue or a mix)

Quad spot line configuration (available in red or blue or a mix)

Quad line configuration (available in red or blue or a mix)

Picture of a single spot light, the mounting bracket is included in the price, but is not shown in this picture.

Picture of the spot light with the snap on lens to convert the spot into a straight line at no extra charge. The line only works to about 30 feet down or out. If you have a crane higher than 30 feet, we suggest you use the spot light, which will show up effectively on cranes up to 100 feet high.
